

EDUCATION

PSIT (AKTU)

B.Tech in Computer Science (AI)

- Percentage: 70%

Kanpur, India

2021-2025

Jain International School

Intermediate (12th, CBSE)

- Percentage: 79%

Kanpur, India

2021

SKILLS

Frontend

- Web Client Development** - JavaScript (ES6+), React.js, HTML5, CSS3
- UI & Responsive Design** - Responsive Web Design, cross-browser layouts, Figma
- API Integration** - REST APIs, Postman

Backend, Databases & Languages

- Backend Development** - Node.js, Express.js, webGI
- Databases** - MySQL, MongoDB, PostgreSQL, Redis
- Programming Languages** - Java, Python, C, C++, JavaScript, TypeScript, SQL, Three.js

Testing, Tools & Core

- Testing & Automation** - Selenium, Playwright, Postman
- Tools** - Git, GitHub, Figma, OpenAI APIs
- Core Concepts** - Data Structures, OOP, REST APIs, Agile Methodology

AI / ML

- AI & Machine Learning** - ML Basics, NLP Fundamentals, DeepFace, Prompt Engineering, Agentic AI Concepts

PROJECTS

- ReconcileFlow – Payment Reconciliation Engine** (Node.js, TypeScript, PostgreSQL, Redis, React): Built a reconciliation engine with Stripe web-hook idempotency (Redis + Postgres), BullMQ async processing with dead-letter queue recovery, append-only audit logging via Postgres triggers, and a real-time Socket.IO dashboard with chaos-mode fault injection.
- ConvoConnect – AI Recruitment Platform:** Automated resume shortlisting using NLP and sentiment analysis; built a candidate scoring system for skill and cultural-fit evaluation.
- Skyward – 3D Satellite Tracking Physics Engine:**(React, Three.js, WebGL, Node.js, MongoDB): Engineered a 60 FPS 3D visualization engine tracking 500+ live satellites by bypassing React reconciliation for direct WebGL memory mutation. Implemented client-side SGP4 orbital propagation and geodetic math for real-time trajectory calculation. Architected an $O(1)$ backend geospatial caching system utilizing Geohash bucketing and MongoDB TTL indexes to handle heavy concurrent traffic.

EXPERIENCE

Cognizant

Program Analyst Trainee

2025.04-Present

- Working on enterprise client applications in an agile delivery model, supporting development, requirement analysis, testing, and deployment cycles.
- Writing automation scripts using Selenium and Playwright for UI testing, and performing API validation using Postman.

Devtern

Data Science Intern

2024.02-2024.04

- Built ML models and automated data pipelines using Python; performed EDA and visualization with Matplotlib and Seaborn.

Freelance

RLHF Prompt Engineering

2024.12

- Designed optimized prompts that improved human-AI alignment in model responses.

ACHIEVEMENTS

- The Ultimate MySQL Bootcamp
- Book Chapter: "IoT Integrated Cloud and Data Solutions"

Udemy
CRC Press, Taylor & Francis
